Broad-spectrum antifungal

Mycelex®

1% Cream
1% Solution

Indications: Mycelex Cream and Solution are indicated for the topical treatment of the following dermal infections: tinea pedis, tinea cruris, and tinea corporis due to *Trichophyton rubrum*, *Trichophyton mentagrophytes*, *Epidermophyton floccosum*, and *Microsporum canis*; candidiasis due to *Candida albicans*; and tinea versicolor due to *Malassezia furfur*.

Contraindications: Mycelex Cream and Solution are contraindicated in individuals who have shown hypersensitivity to any of their components.

Warnings: Mycelex Cream and Solution are not for ophthalmic use.

Precautions: In the first trimester of pregnancy, Mycelex should be used only when considered essential to the welfare of the patient.

If irritation or sensitivity develops with the use of Mycelex, treatment should be discontinued and appropriate therapy instituted.

Adverse Reactions: The following adverse reactions have been reported in connection with the use of this product: erythema, stinging, blistering, peeling, edema, pruritus, urticaria, and general irritation of the skin.

Dosage and Administration: Gently massage sufficient Mycelex Cream or Solution into the affected and surrounding skin areas twice a day, in the morning and evening.

Clinical improvement, with relief of pruritus, usually occurs within the first week of treatment. If a patient shows no clinical improvement after four weeks of treatment with Mycelex, the diagnosis should be reviewed.

How Supplied: Mycelex Cream 1% is supplied in 15 g and 30 g tubes, and 90 g package (2 x 45 g tube).

Mycelex Solution 1% is supplied in 10 ml and 30 ml plastic bottles.

Store between 35° and 86°F.
